OKLAHOMA CITY, OK – Experienced Businessman and Lifelong Conservative, Paul Hassink, filed as a candidate for Oklahoma House Representative District 79 last week at the Capitol.

“Today, our country is headed in the wrong direction. There are a lot of good people in our state rowing against the national current, and I am here to join them in their efforts. Washington D.C. is pushing higher taxes and more regulations that result in less buying power for you and your family. Voters in House District 79 deserve a conservative voice in the legislature, as opposed to the single-issue politician who has consistently voted against our individual liberties. My business experience and conservative convictions make me uniquely qualified to be the Republican nominee this June.”

Hassink has 40 years of business experience. He began as an engineer and earned the responsibility of Director. Paul Hassink led 150 engineers and designers in support of a billion-dollar construction budget spanning from Virginia to Texas. He planned major power grid expansions. As an expert in grid reliability, he advocated for regulatory policies that prioritized system security over financial markets.

“As I have been knocking on doors throughout our district, voters have communicated their dissatisfaction with both the irrational policies coming out of Washington D.C., and the votes of our current representative. Whether it is the economy, energy prices, or parental rights in education, District 79 voters want an experienced professional with proven accomplishments ready to enact the beneficial common sense conservative legislation we deserve. I am a lifelong conservative who will lead on issues that will improve the lives of the people of our state.”

Paul and Pamela, his wife of 38 years, have six successful children and fourteen grandchildren. He and Pamela have attended the Church of St. Mary, since moving to Tulsa 28 years ago. Paul has lived out his faith by creating a Catholic preschool in 1989 and participating in the Knights of Columbus since 1991. Paul is a licensed Professional Engineer and a member of the Institute of Electrical and Electronics Engineers.
